Saqlain Malik

AI Engineer
Remote || Bengaluru India

Professional Biography

AI Engineer with 4+ years of experience in software engineering, data platforms, and enterprise solutions. Skilled in building agentic systems, data observability platforms, and full-stack applications using Python, cloud-native infrastructure, and modern AI frameworks. Experienced across B2B sales automation, CRM integrations, and data engineering, with a track record of delivering scalable, production-grade solutions on Azure Kubernetes.

Skills Summary

Industry / Domain Expertise

- B2B Sales & Operations
- Customer Relationship Management (CRM)
- Enterprise Resource Planning (SAP ERP)
- SaaS (Software-as-a-Service)
- Information Technology

Skills

- Gen AI
- PyTorch
- Deep Learning
- LangChain
- LangGraph
- CrewAI
- Prompt Engineering
- Transformers
- FastAPI
- Python, C/C++, JavaScript
- SQL
- HTML, CSS
- SAP CPQ (Callidus Cloud)
- Salesforce Agentforce
- RAG
- Agile Software Development
- Microsoft Azure
- Google ADK
- MCP
- OpenMetadata
- Airflow
- Apache Spark

Tools & Certification

- GEN AI-White Belt
- GEN AI- Yellow Belt
- SAP CPQ (Callidus Cloud)
- Salesforce Agentforce
- VS Code
- Docker
- Azure Kubernetes
- Hugging Face
- JIRA
- GitHub

Highlights

- Engineered an end-to-end Generative AI system that automates resume screening and job description matching. This system also generates tailored interview questions based on candidate skills, significantly improving the hiring process
- Contributed to a full-stack project developing a robust evaluation framework to assess and benchmark AI agents across various performance metrics.
- Improved an Image Recognition model by achieving significant accuracy gains through advanced hyperparameter tuning.

- Designed and delivered complex business and sales solutions within SAP CPQ, demonstrating extensive experience in integrated enterprise environments including Salesforce (CRM) and SAP ERP.
- Built iDataObs, an end-to-end data observability platform deployed on Azure Kubernetes (AKS) across four namespaces. Implemented a medallion architecture (Bronze/Silver/Gold) on Apache Spark and Apache Iceberg with ADLS Gen2 storage, automated pipeline orchestration via Apache Airflow, schema drift detection, anomaly detection with dynamic threshold alerting, end-to-end data lineage tracking, data quality validation using Great Expectations, and a KPI dashboard—all governed through OpenMetadata.

Key Experiences

AI Engineer| NTT Data

March 2025– Present

- Applied Gen AI and Agentic AI across enterprise domains including data observability, CRM, and developer tooling.
- Designed and implemented a modular Django backend for an agentic solution, enabling scalable agent orchestration and prompt version management.
- Developed RESTful APIs and React components for prompt testing, version control, and metric visualization, improving usability and operational transparency.
- Built agentic systems on Salesforce Agentforce, deploying chatbots across community sites, Sales, and Service clouds to enhance CRM capabilities.
- Worked on a full-stack project focused on developing and implementing a robust evaluation framework to assess and benchmark AI agents across various performance metrics
- Explored and worked on agentic systems using frameworks like LangChain, LangGraph, CrewAI, and Google ADK.
- Architected and delivered iDataObs, a production-ready data observability platform for Data Quality and Governance. Implemented a medallion architecture (Bronze/Silver/Gold) on Apache Spark and Apache Iceberg with ADLS Gen2, orchestrated via Apache Airflow. Deployed across four AKS namespaces with cross-namespace DNS, featuring schema drift detection, dynamic threshold alerting, data lineage, and a KPI dashboard powered by OpenMetadata.
- Completed internal training programs in Gen AI and Agentic AI, earning White Belt, Green Belt and Yellow Belt certifications.

Digital Technology Engineer | NTT Data

Sept 2021– Feb 2025

- Supported requirement gathering, designing, and performing the SAP CPQ implementation.
- Worked with Integrated Systems (SFDC, CPI, CPS, ERP, VC) and streamlined the dataflow pipelines.
- Performed Production deployments, UAT and QA support.
- Conducted KT Sessions to help the new on-board developers and provided technical support
- Leveraged Salesforce Agentforce to build AI agents that enhanced customer experience and introduced agentic capabilities to CRM workflows.
- Explored AI capabilities across CRM and Enterprise domains to enhance B2B Sales Operations.
